Jurupa Valley, California

Indicators Report

by The National Economic Education Delegation (NEED)

April 20, 2024

Exploring the economics, demographics, and well-being of Jurupa Valley and its residents through indicators.

This report was produced by the:

National Economic Education Delegation 271 Arias St. San Rafael, CA 94903 415-336-5705 www.NEEDEcon.org Contact: Jon@NEEDEcon.org

Executive Summary

Assessing the City with Indicators

About this Report

This report provides background or summary information for the city of Jurupa Valley (the City) in the form of indicators.

Using this Report

Indicators are measures of various aspects of a regional economy. They help to provide an indication of the quality of life in a region and progress toward improving conditions in the local economy. This report focuses on indicators for changing demographics, incomes, housing markets, commute patterns, and employment in Jurupa Valley. These indicators are compared to Riverside County (the County) as a whole, a broader region where one is well defined, California, and the United Sates.

This report is vital for understanding trends in the underlying economy. It does not provide forecasts, but Rob Eyler and Jon Haveman at Economic Forensics and Analytics are available to provide them if that is of interest.

Topics Covered:

- **Demographics:** A detailed snopshot of Jurupa Valley demographics is presented. This provides evidence on the size, age and sex, income and poverty status, race and ethnicity, housing status, living arrangements, education, health, and transportation choices of the population. Beyond the current population level, data on trends in local population growth, in comparison with other broader regions is presented, in both tabular and graphical form.
- **Employment Report:** Here, we provide a brief snapshot or employment and unemployment in Jurupa Valley and how the City's experience differs from broader regions.
- Income and Earnings: Vital to understanding the prosperity of a city relative to its surrounding area is information on income and earnings. We provide a ranking of the City's income relative to all cities in California as well as growth relative to local regions. Inequality and poverty status are also important indicators for the level of equity in the community. We provide evidence of trends in both, not only for all residents, but also for children separately.
- Housing: This section provides evidence on the cost and availability of housing. Both median home values and rental costs are included, along with detailed information on home ownership, by age and income, in particular. Further, evidence is provided on the housing burden in the City, again, in comparison with other broader regions. We also provide evidence on the rate at which new buildings and units are permitted along with a broader housing picture. Finally, we provide evidence on the age of the housing stock in Jurupa Valley, along with information on how long the City's residents have been in place.
- Transportation: Increasingly important, in the wake of the pandemic, is an understanding of the transportation patterns and choices of local residents. We provide detailed evidence on the proprotion of residents who work from home and on the various transportation choices of those who head to the office. This information is also provided for those who work in Jurupa Valley, but do not necessarily live in Jurupa Valley.
- **Migration:** Population changes comes primarily through organic causes: births and deaths. Migration between regions also plays a significant role in population growth. A final section of the report provides evidence on migration into and out of the City.

Demographics

Definition:

Data on the demographics of a city indicate the nature of the population, with a focus on age, gender, race and ethnicity, as well as household compositon.

Why is it important?

The characteristics and growth of Jurupa Valley's population are fundamental indicators of the city's growth potential.

A Demographic Snapshot

Statistic	2022	2019
POPULATION		
Population Estimate (#, 5yr)	105,672.0	105,653.0
Veterans (#, 5yr)	2,568.0	3,117.0
Foreign born persons (%, 5yr)	27.5	26.
Population age 25+ (#, 5yr)	66,385.0	64,013.0
AGE AND SEX		
Persons under 5 years (%, 5yr)	6.4	7.
Persons under 18 years (%, 5yr)	25.9	28.
Persons 65 years and over (%, 5yr)	11.4	10.
⁻ emale persons (%, 5yr)	49.6	50.
NCOME AND POVERTY		
Median household income (\$, 5yr)	91,562.0	70,642.
Per capita income in past 12 months (\$, 5yr)	28,723.0	22,347.
Persons in poverty (%, 5yr)	10.3	13.
Children age less than 18 in poverty (#, 5yr)	4,057.0	5,693.
Children age less than 18 in poverty (%, 5yr)	15.0	19.
White alone (%, 5yr)	36.6	52.
African American alone (%, 5yr)	3.4	3.
American Indian or Alaska Native alone (%, 5yr)	1.2	0.
Asian alone (%, 5yr)	4.5	3.
Native Hawaiian and Other Pacific Islander alone (%, 5yr)	0.2	0.
Two or More Races (%, 5yr)	12.7 72.0	3.
Hispanic or Latino (%, 5yr)		71.
White alone, not Hispanic or Latino (%, 5yr)	18.5	20.
HOUSING	07 007 0	06 001
Housing units (#, 5yr)	27,287.0	26,021.
Owner-occupied housing units (%, 5yr) Median value of owner-occupied housing units (\$, 5yr)	69.9	.67 363,000
Vedian selected monthly owner costs-with a mortgage (\$, 5yr)	481,500.0 2,282.0	1,859.
Vedian selected monthly owner costs-with a mongage (\$, 5yr)	2,202.0	516.
Median gross rent (\$, 5yr)	1,618.0	1,324.
FAMILIES AND LIVING ARRANGEMENTS	1,010.0	1,524.
Households (#, 5yr)	25,957.0	24,907.
Persons per household (#, 5yr)	4.0	4.
Living in same house 1 year ago, % of persons age 1+ (5yr)	92.6	
EDUCATION	52.0	00.
High school graduate or higher, % of persons age 25+ (5yr)	71.7	70.
Bachelor's degree or higher, % of persons age 25+ (5yr)	14.6	13.
HEALTH		
With a disability, under age 65 years (#, 5yr)	5,703.0	7,146.
Persons without health insurance, under age 65 years (%, 5yr)	12.9	12.
ABOR FORCE		
n civilian labor force, persons age 16+ (%, 5yr)	63.7	63.
n civilian labor force, women age 16+ (%, 5yr)	54.8	53.
Employed, persons age 16+ (%, 5yr)	57.9	56.
Self employed (%, 5yr)	9.4	8.
TRANSPORTATION		
Mean travel time to work, workers age 16+ (Mins., 5yr)	29.9	31.
Drive alone in private vehicle (%, 5yr)	76.4	76.
Using public transportation (%, 5yr)	1.2	2.
Worked from home (%, 5yr)	5.6	4.

Current Population

The data in these two tables and the following two graphs are from the CA Department of Finance (DOF). The DOF produces population estimates for geographies around California twice a year: January and July. As estimates for cities are only available in January, these two tables are based on the January data. The remaining figures are from the American Community Survey (ACS), provided annually by the U.S. Bureau of the Census.

Employment Report

Citywide Employment and Unemployment

Definition:

Each month, California's Employment Development Division (EDD) publishes an update on employment in California and in MSAs, counties, and cities all across the state. The report focuses primarily on non-farm employment, providing estimates of changes in employment by industry as well as unemployment in each region. Data for cities is limited to aggregate employment, labor force, and unemployment data. Those are reported below.

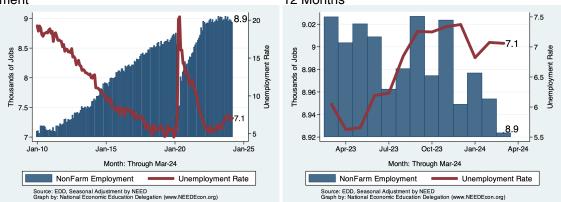

Why is it important?

Employment growth is a fundamental indicator of the health of an economy.

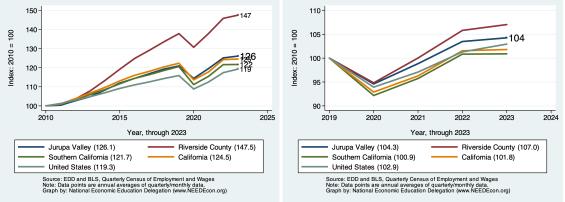

Table 3. Jurupa Valley Summary for March, 2024								
	Change From:							
Category	Current Value	Last Month	2 Months Ago	Last Year				
Employment	8,924	-30	-53	-103				
Labor Force	9,644	9	15	96				
Number Unemployed	678	-4	21	97				
Unemployment Rate	7.0	-0.0	0.2	0.9

MSA Employment by Industry

California's Employment Development Division (EDD) does not regularly produce data on employment by industry for cities. However, we are able to report industry-level employment data for the Riverside-San Bernardino-Ontario MSA. The following table provides the latest data for the MSA.

			Empl	% Growth - Annualized Rate					
Industry	Employment	Share	Growth	Month	Qtr	6mo	1yr	3yr	5yr
Total Nonfarm	1,694,223	100.0	5,971.1	4.3	0.5	0.8	1.6	3.3	2.1

Income and Earnings

Per Capita Income Growth

Definition:

Per capita income is the average income per person in Jurupa Valley. Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or unincorporated business, from the ownership of financial assets, and from government and business in the form of transfer receipts. Noncash government benefits are not included.

Why is it important?

Income is the money that is available to persons for consumption expenditures, taxes, interest payments, transfer payments to governments and the rest of the world, or for saving. As such, it is an important indicator of economic well-being in a community.

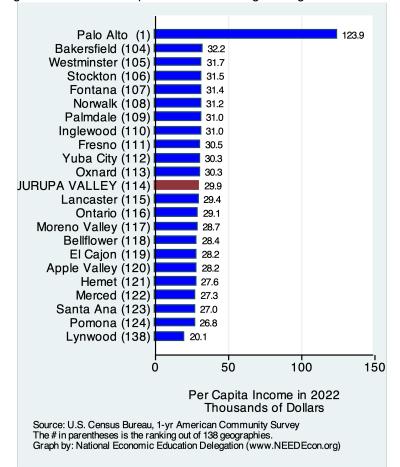

Figure 24: Real Per Capita Income Ranking Among California Cities

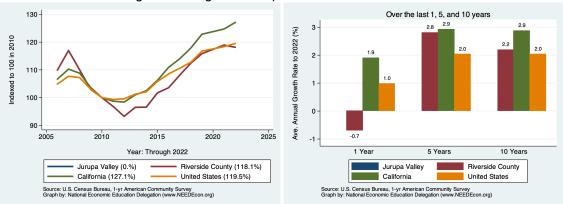

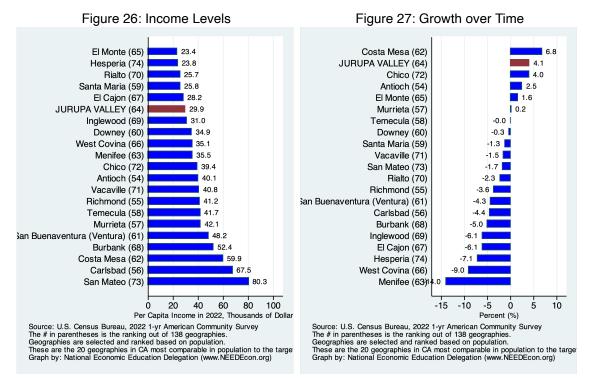

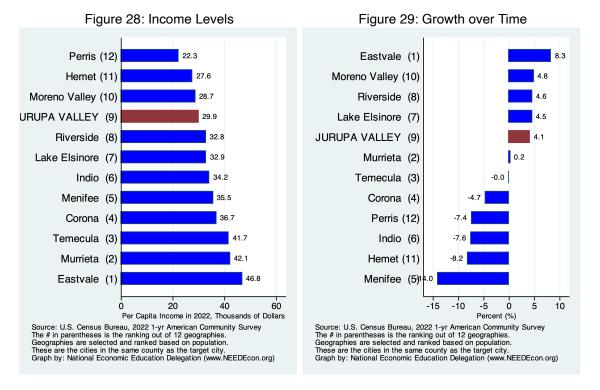

Figure 25: Regional Comparison of Growth over Time

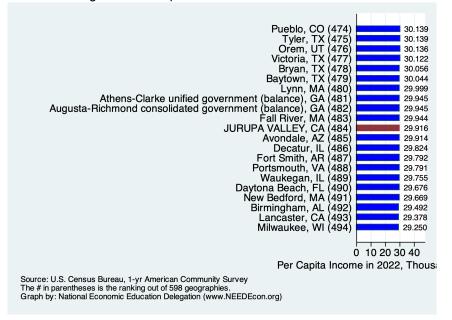

Real Per Capita Income Ranking Among California Cities - w/Comparable Populations

Real Per Capita Income Ranking Among Cities in Riverside County

Figure 30: Comparison with All Cities Nationwide

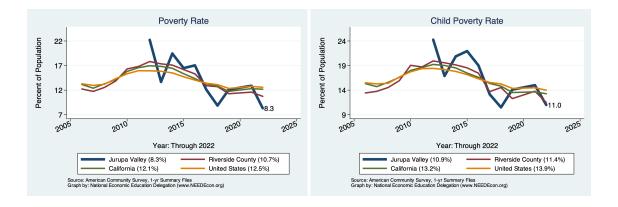

Poverty and Inequality

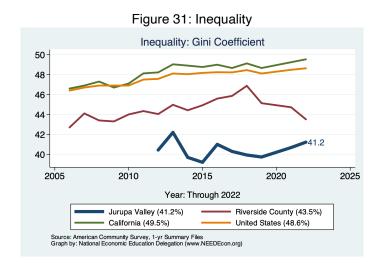

Definition:

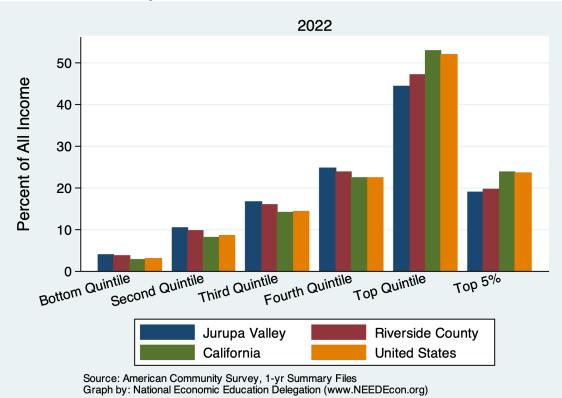

The local poverty rate provides an indication of the well-being of those at the bottom of the income distribution. The federal poverty rate measures the proportion of households in the region that are classified as living in poverty. Also included are measures of the extent to which the City's children are impoverished. Measures of the income distribution provide further evidence on disparities in income in the region and how those disparities have changed over time.

Why is it important?

It is important to track measures of poverty and inequality to assess the extent of income disparities in the region, with an eye toward understanding how well the local economy is performing for all of its citizens.

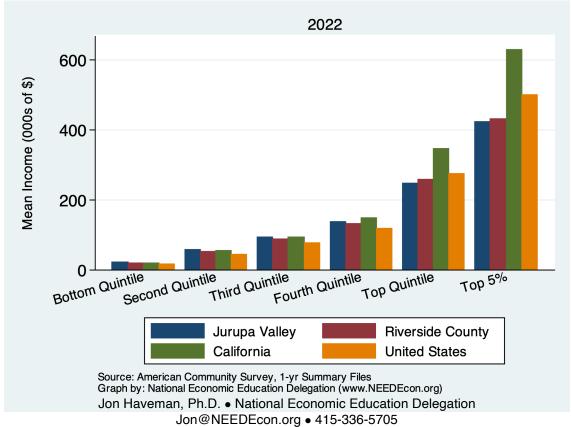

Housing

Housing Costs and Affordability

Definition:

Housing costs are measured in several different ways. First, we provide evidence on the evolution of median home prices, median rental price, and finally through evidence on the housing burden in the city and comparison regions. Housing burden is defined as a household needing to commit more than 30% of their household income toward housing costs. The median value is the amount in the middle. Fifty percent of units are above the median and 50 percent are below.

Why is it important?

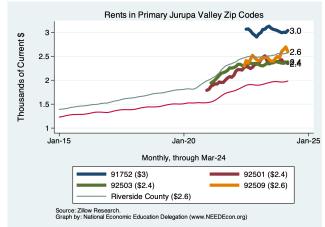

Housing is one of three fundamental necessities, along with food and clothing. A measure of the cost of housing is an integral part of the measurement of the cost of living in a specific community. This is particularly true in cities and regions throughout the Bay Area, where housing costs are high relative to income.

Housing Picture

Definition:

Percent Change Since 2012

Housing costs are measured in several different ways. First, we provide evidence on the evolution of median home prices, median rental price, and finally through evidence on the housing burden in the city and comparison regions. The median value is the amount in the middle. Fifty percent of units are above the median and 50 percent are below.

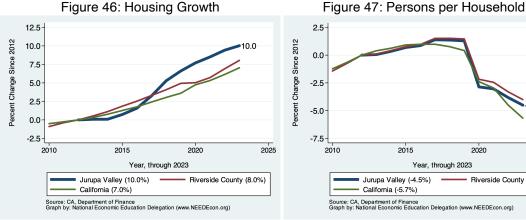

Table 5. Housing Market Indicators

Why is it important?

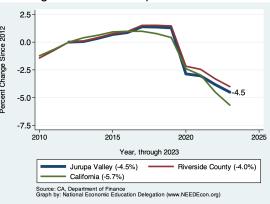

In areas where the rate of population growth exceeds the rate of housing growth, this is likely to reflect a tightening housing market. A tightening housing market will also likely be reflected in lower vacancy rates and higher occupancy rates. It may also be reflected in higher numbers of people per household.

				% Cha	nge from

Vintage of Residential Housing

Why is it important?

This section provides evidence on the year in which residential housing in Jurupa Valley was built. We break it down into owned versus rented residences and provide a comparison across Riverside County and broader regions. A sense of the age of housing in a region provides an indication of the urgency with which a region might pursue additional housing. As the housing stock ages, an urgency with which renovations and rebuilds are permitted might result. All things equal, more recently constructed housing will be more likely to meet current codes and standards. Remodeling of existing units will be more desirable when existing units are, on average, older.

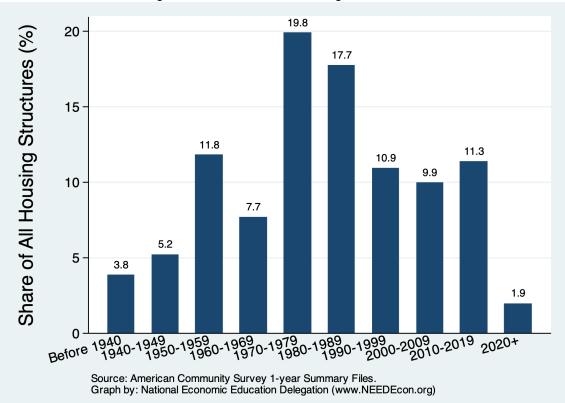

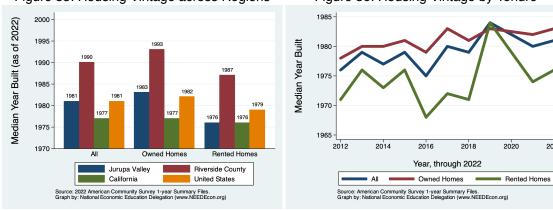

Figure 54: Distribution of Housing Construction

Figure 55: Housing Vintage across Regions

Figure 56: Housing Vintage by Tenure

2022

Occupation of Residential Housing

Why is it important?

The duration of residence in a city is important for developing future policies regarding growing the local population. If a region is highly mobile, evidenced by most residences having been recently occupied, a city might propose policies to reduce that mobility, or ask why the mobility happens. Policies could be put in place to either reduce or increase migration.

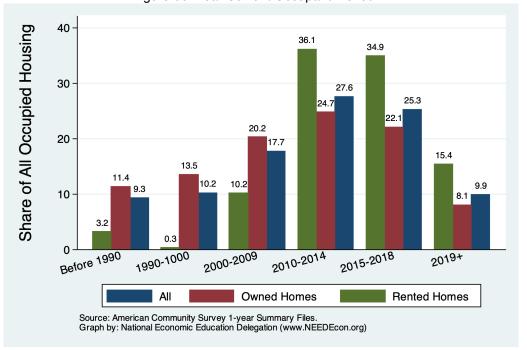

Figure 60: Year Current Occupant Moved In

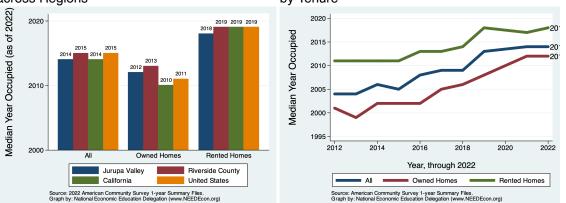

Figure 61: Year Occupied by Current Residents Figure 62: Year Occupied by Current Residents across Regions by Tenure

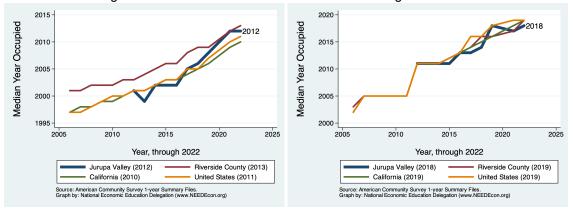

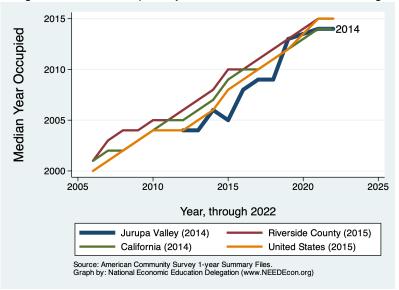

Figure 63: Year Occupied by Current Residents Figure 64: Year Occupied by Current Residents for Owned Housing for Rented Housing

Definition:

This indicator provides evidence on the number of residential buildings that are permitted for construction each year. Permit data for Jurupa Valley is compared with data from Riverside County as a whole and broader regions. The statistic provided scales the number of permits by population. This is done to facilitate comparisons across regions.

Why is it important?

Building permits are the best indicator available of new units coming on the market. In order for a region's population to grow and flourish, new residential properties must be added to the existing stock. Building, both in the City and in the County more generally, is an indication of the extent to which new residences accommodate new residents or are affecting prices through increased supply.

Commute Patterns

During the recovery from the Great Recession, the period from 2010 to 2019, the Bay Area economy, and Silicon Valley in particular, has been growing at a pace roughly double that of the state as a whole and triple that of the nation. This growth has precipitated a tight housing market and also brought about some significant changes in commute patterns, many of which have been reversed by the pandemic. Recent years have seen significant changes in both the mode of transportation and commute times.

Mode of Transportation

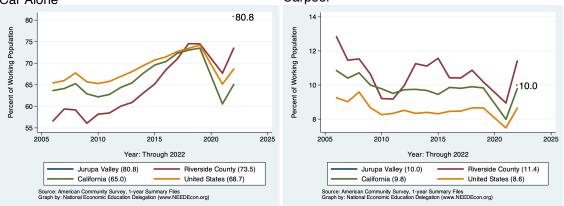

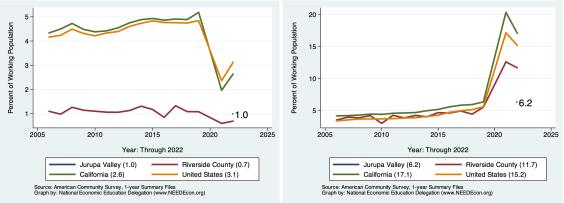

Figure 75: Percent of Workers Commuting by Figure 76: Percent of Workers Commuting by Carpool

Figure 77: Percent of Workers using Public Figure 78: Percent of Workers Who Work From Transportation Home

The first table on this page presents data for those who LIVE in Jurupa Valley. The second provides data on those who work, but do not necessarily live in Jurupa Valley. The final two columns provide for a comparison of commute mode choices of people locally with those in California more broadly.

Place of Work

This section provides evidence on where workers living in Jurupa Valley work. As evidenced in the first table, some of Jurupa Valley's employed workers work in the City, but many do not. The first table and graph pair provide evidence at the county level while the second provide evidence with regard to working outside of the Jurupa Valley city boundary.

	Male		Female		All Workers		All of CA

Walked	21,778	30,552	93.9	27,247	98.0
Taxicab, motorcycle, bicycle, or other means	25,743	40,631	83.5	36,218	87.1
Worked from home	45,825	79,738	75.7	69,180	81.2
Total:	37,819	49,818	75.9	46,365	81.6

Source: 2022 1-year American Community Survey, Summary File

Notes: 1) Ratio = the ratio of the regional median to either the CA or US median, relative to the Total ratio.

Values above 100 imply a high local median. Values below 100 imply a low local median.

For example, a value of 200 means that the local mean is 2x higher than would be expected.

For "Total:", ratio is simply the ratio of the medians.

2) For regions with more than one geography, the medians are averages weighted by working population.

Migration

Overall Migration Flows

Definition:

The United States is a country with an increasingly mobile population. People move, migrate, from one place to another with increasing frequency.

Why is it important?

Having a handle on whether or not Jurupa Valley is a net recipient (migration inflows) or donor (migration outflows) of population is very important for understanding trends in the City's development. This section outlines migration patterns by age, education, income, marital status, and housing tenure. Understanding recent trends is very important for making policy, investment, and other decisions about the future. Also, understanding the extent to which the population is stable, or experiences significant turnover each year is helpful for planning purposes.

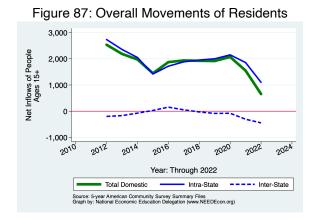

Table 17: Migration by Income

		Ne	Net Inflows								
			Sam	e State		-					
			W/in	Between	Across	From					
Category	Population	All Migration	County	Counties	States	Abroad

Source: 2022 5-year American Community Survey, Summary File

Note: The data in this and other tables in this section are limited in that there is no information on the City's population that has moved abroad.

The "From Abroad" column is gross movements into the City from abroad.

References and Sources

The majority of the data presented in this report are from the American Community Survey (ACS). For larger geographies, the 1-year Summary Files provide the data. For smaller communities, roughly those with less than 65,000 in population in 2021, the 5-year Summary Files provide the data.

The ACS data are supplemented by building permit data from the U.S. Census Bureau, population and housing data from the California Department of Finance, and home price and rental rates from Zillow.

U.S. Census Bureau. American Community Survey 1-year and 5-year Summary Files. https://www. census.gov/programs-surveys/acs/data/data-via-ftp.html. The 1-year data are released in September each year and the 5-year data are relased in January.
