 NATIONAL ECONOMIC
EDUCATION DELEGATION

1

National Economic Education Delegation

- **Vision**
 - One day, the public discussion of policy issues will be grounded in an accurate perception of the underlying economic principles and data.
- **Mission**
 - NEED unites the skills and knowledge of a vast network of professional economists to promote understanding of the economics of policy issues in the United States
- **NEED Presentations**
 - Are **nonpartisan** and intended to reflect the consensus of the economics profession

 NATIONAL ECONOMIC
EDUCATION DELEGATION

2

The State of the Economy

- For much of 2018, observers described US economy as a *“Goldilocks Economy”*
 - Real GDP growth near 3.0%
 - Low unemployment (3.6%) and job creation (roughly 200k jobs added per month)
 - Low inflation (around 2.0%)
- By the end of 2018 and into 2019, the US economy shown some signs of slowing and there is some worry about potential *“bears”* on the horizon
 - Slowing industrial production
 - Tariffs, Trade Policy and International Trade
 - Slowing world economy.
- Like any story, we begin with a set-up and review progress since the end of *Great Recession*

4

5

6

7

What Is “Accounting” for the Slower Growth?

- **Expenditures Relationship to GDP growth.**
 - GDP is the sum of four categories of spending:
 - Consumption (**C**)
 - Investment (**I**)
 - Government spending (**G**)
 - Net Exports: Exports – Imports (**NX**)
- **Productivity and Inputs as Drivers for GDP Growth.**
 - Employment
 - Productivity

NATIONAL ECONOMIC EDUCATION DELEGATION

8

Composition of Real GDP

NATIONAL ECONOMIC
EDUCATION DELEGATION

9

9

Composition of GDP

- **Slow growth in any of these categories will slow overall GDP growth.**
- **How does each component account for changes in GDP growth pre- vs. post-recession?**
- **What explains current trends in each component?**

NATIONAL ECONOMIC
EDUCATION DELEGATION

10

10

Understanding Contributions to GDP Growth

- **GDP Growth is a combination of the growth in its components:**
 - Consumption, Investment, Government, and Net Exports
 - It's a weighted average of these components

- **For example: Consumption**
 - If consumption accounts for **2/3** of the economy,
 - If consumption grew by **3%**,
 - It implies that consumption growth accounts for **2 percentage points** of GDP growth; that is, $2\% = \left(\frac{2}{3}\right) * 3\%$.

11

Contribution to GDP Growth: Consumption

From 1990-2007: Average Contribution from Consumption was 2.18%

Since 2010, Average Contribution from Consumption is 1.68%

12

Real Disposable Personal Income

13

Real Disposable Personal Income - Growth

14

Personal Consumption Expenditures

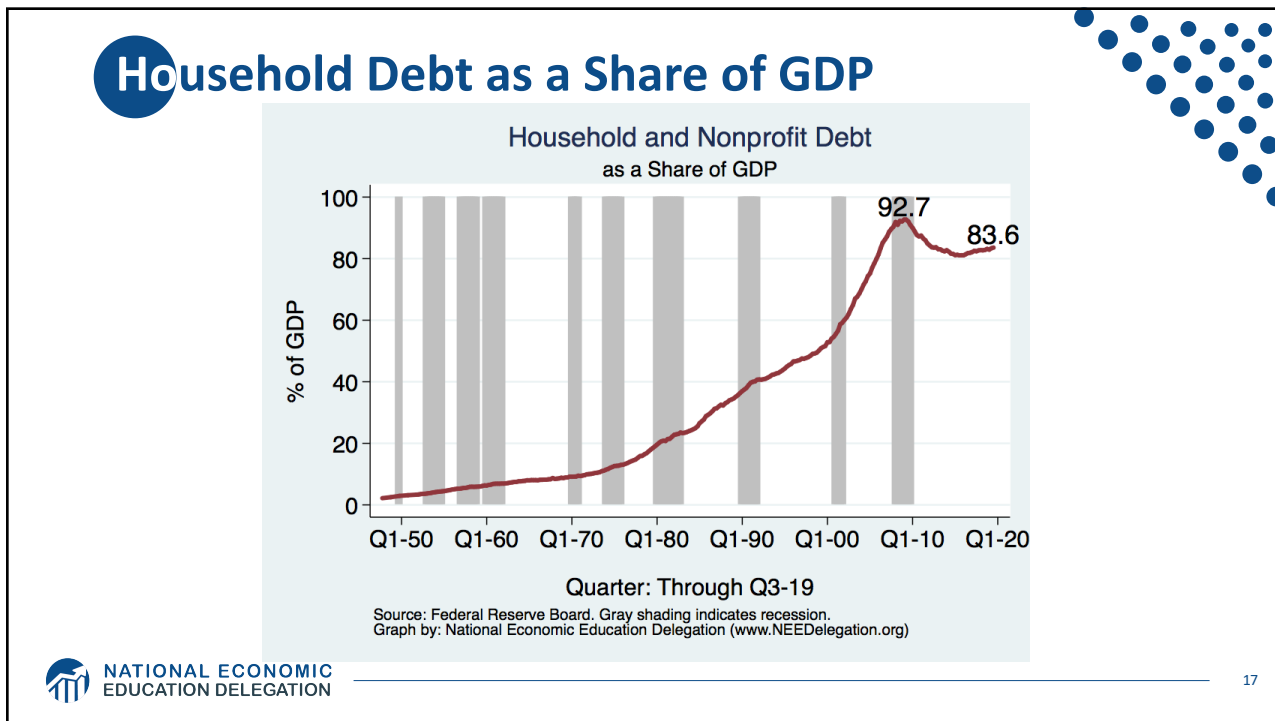

- **Consumption has been slow to recover.**
 - Pre-crisis average contribution of consumption expenditures is 2.15 percentage points.
 - Post-crisis contribution is 1.7 percentage points.
- **In other words, its contribution to GDP growth is shaving about 0.5 ppt off GDOP growth**

15

Personal Consumption Expenditures

Household Debt: Other Sources

19

Growth in Household Debt by Category

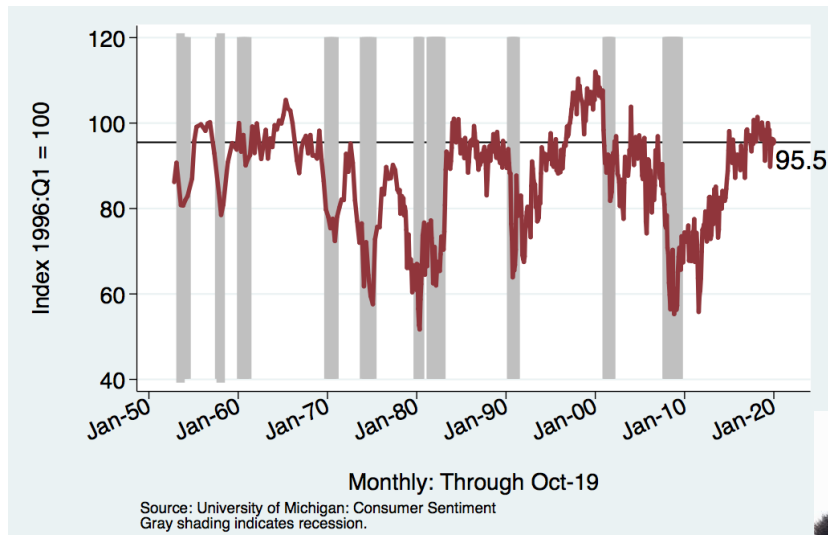

20

Personal Savings

21

Consumer Confidence: Slipping?

22

Investment Expenditures

- Investment expenditures are composed of residential and non-residential spending.
- Residential spending refers to purchases of new homes.
- Non-residential spending refers to capital purchases and new inventory accumulation.
 - Tools, machinery, new factories, commercial real estate.

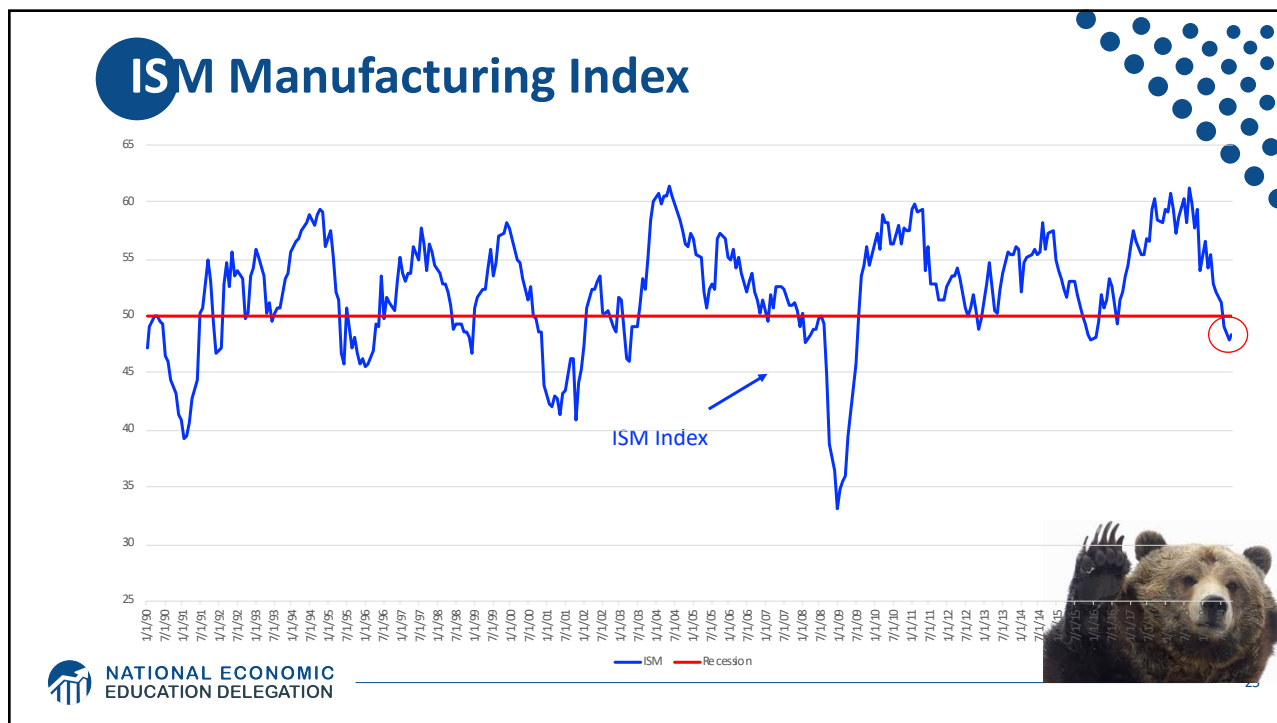

23

Investment Expenditures

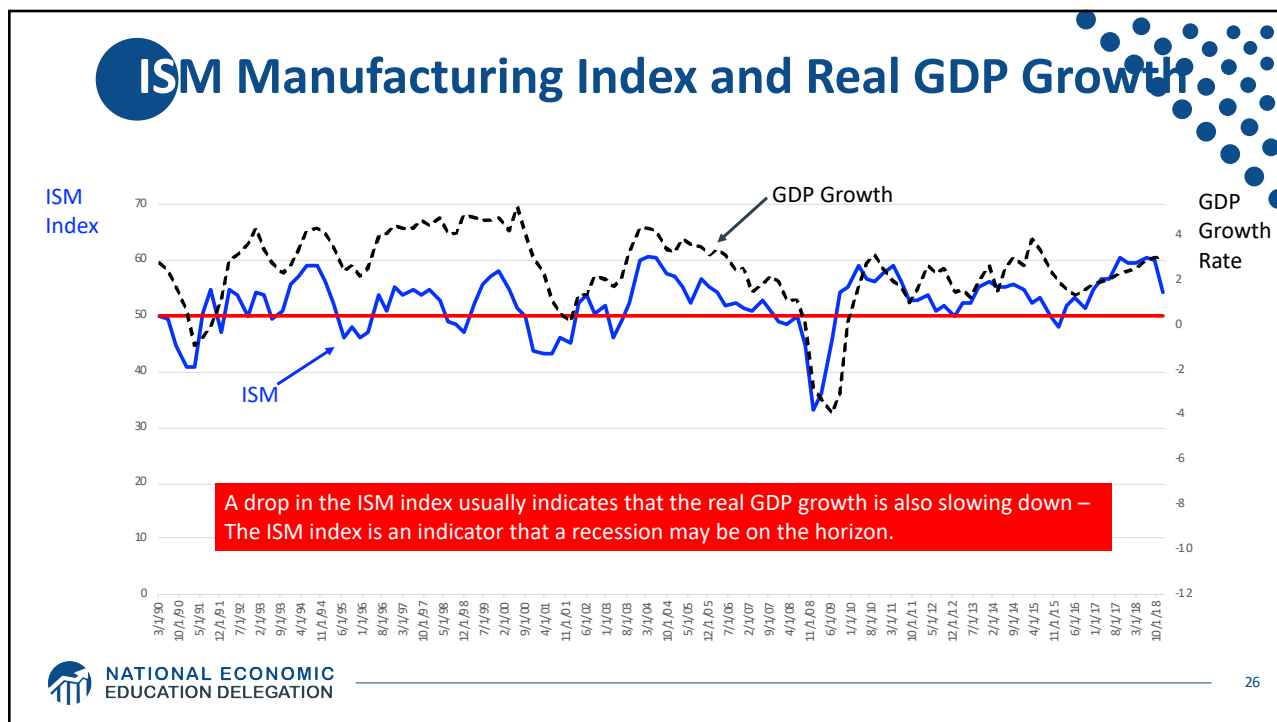

Investment's Average contribution to GDP growth is 0.80

What are Businesses Concerned About

- Trade: Tariffs / Uncertainty
- Slowing World Growth – sluggish demand in export markets
- Slowing Consumption Demand

29

Contributions to GDP: Government

30

Trade's Contribution to GDP: Imports

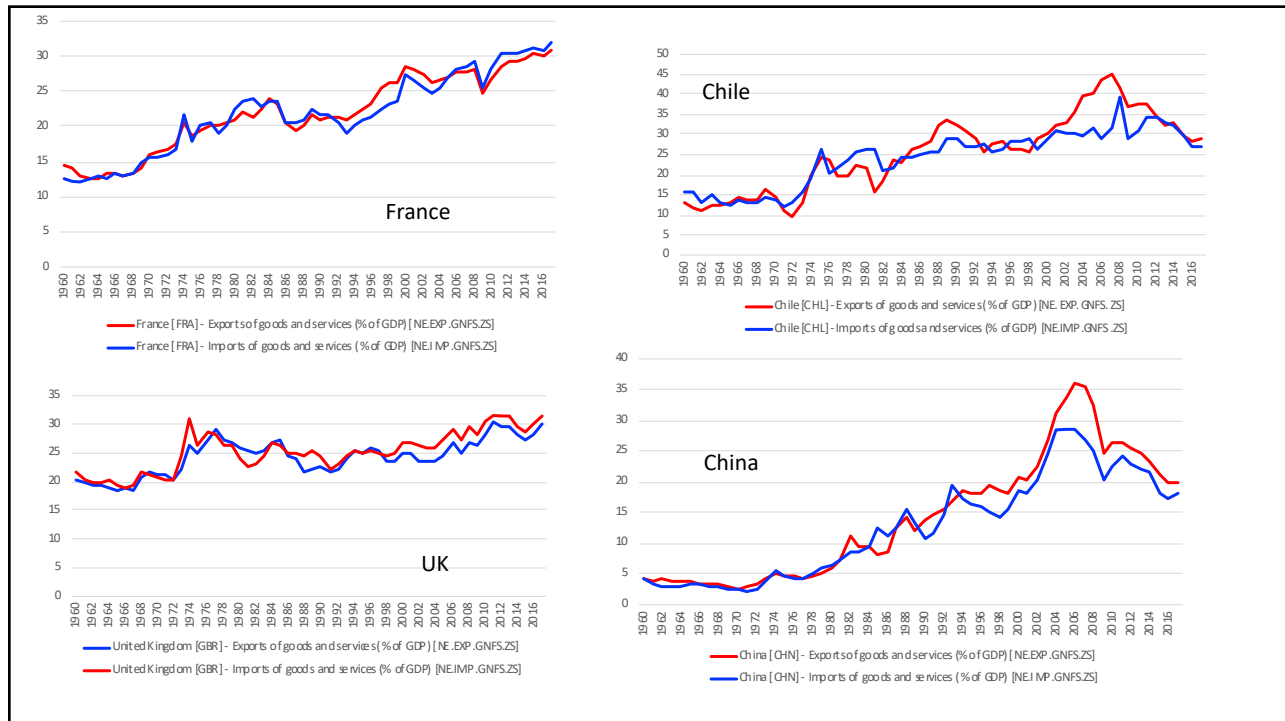

31

Trade's Contribution to GDP: Exports

32

33

Exports and Imports are Not Independent

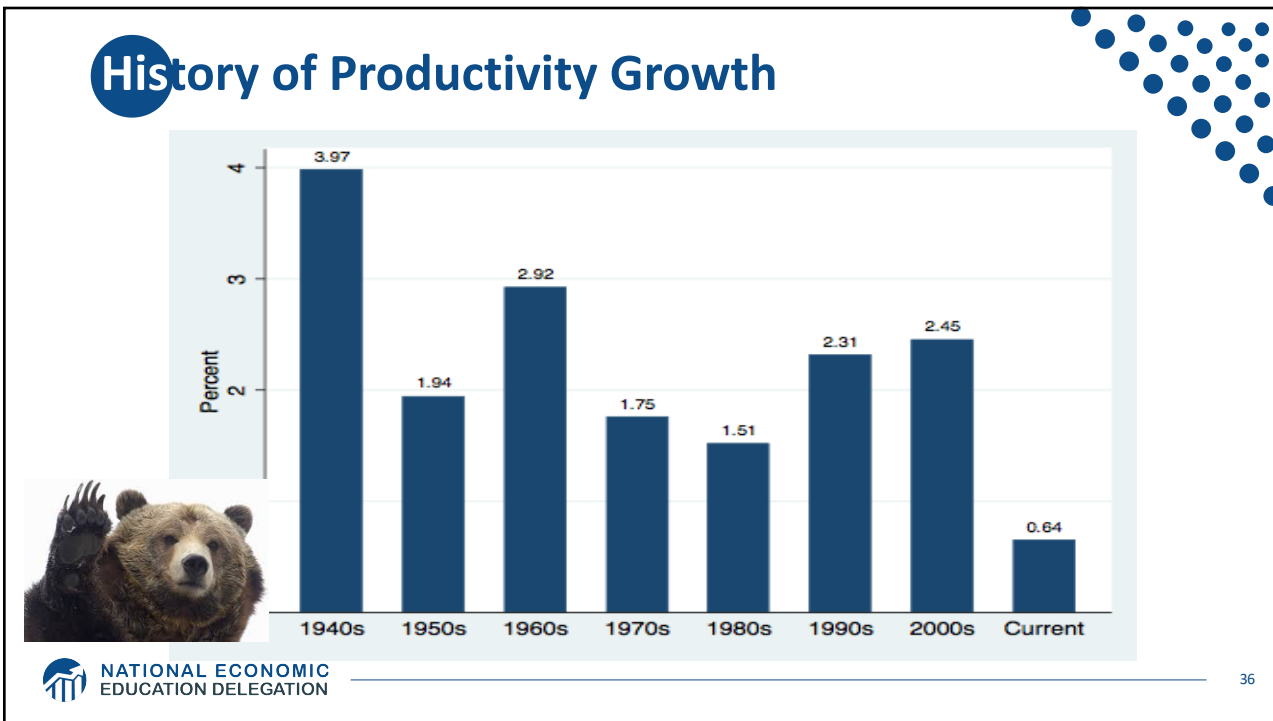

- Consider an attempt to reduce imports through an increase in tariffs:
- First order effect would be a reduction in imports
- Because we buy fewer foreign produced goods and services, there are fewer dollars supplied in the foreign exchange market.
- Because the dollar becomes more *scarce*, the dollar appreciates in value.
- Because the dollar appreciation, exports are more expensive and we export less.

36

GDP Growth, Productivity, and Employment

37

Labor Market Conditions

- **Unemployment rate is low – 3.6%**
- **Monthly employment gains have average about 175,000 over the last six months.**
- **Recent Labor Market Concerns:**
 - Lower employment to population ratio
 - Slow wage growth

Conclusion: Looking Forward

- **Most economists have lowered their projection for 2019 – GDP growth in the 2.0-2.3% range.**
- **Most economist have lowered their growth forecasts for 2020.]'**
 - 67% NABE economists project growth to be between 1.1 and 2.0%
- **Most economists have increased their “probabilities” of recession in 2020.**
 - However, most do not think one will occur in the first half of the year
 - Most do not think it will happen in second half either.
