1

National Economic Education Delegation

- **Vision**
 - One day, the public discussion of policy issues will be grounded in an accurate perception of the underlying economic principles and data.
- **Mission**
 - NEED unites the skills and knowledge of a vast network of professional economists to promote understanding of the economics of policy issues in the United States.
- **NEED Presentations**
 - Are **nonpartisan** and intended to reflect the consensus of the economics profession.

NATIONAL ECONOMIC EDUCATION DELEGATION

2

2

Who Are We?

- **Honorary Board: 48 members**

- 2 Fed Chairs: Janet Yellen, Ben Bernanke
- 6 Chairs Council of Economic Advisers
 - o Furman (D), Rosen (R), Bernanke (R), Yellen (D), Tyson (D), Goolsbee (D)
- 3 Nobel Prize Winners
 - o Akerlof, Smith, Maskin

- **Delegates: 500+ members**

- At all levels of academia and some in government service
- All have a Ph.D. in economics
- Crowdsource slide decks
- Give presentations

- **Global Partners: 45 Ph.D. Economists**

- Aid in slide deck development

Outline

- I. **Debt Basics**
 1. *Definitions and Data.*
 2. *Not all deficits are bad, but since 1982, deficits have not served economic purpose.*
- II. **Economic Costs of the Debt**
 1. *Traditional View: based on rising interest rates*
 2. *But interest rates haven't risen; causing economists to rethink traditional view*
 3. *Two New Optimistic Views*
 1. *Modern Monetary Theory (MMT): Federal Debt Free Lunch!*
 2. *Olivier Blanchard: Stable debt has little cost.*
 4. *A Scariest (More Realistic) View with a Silver Lining*
- III. **The Path Forward**

6

What Does the U.S. Gov't Budget Look Like?

2019 Budget Summary

Revenue	Billions	Outlays	Billions
Income Taxes	\$1,718	Mandatory	\$2,735
Payroll Taxes	\$1,243	Discretionary	\$1,336
Corporate Taxes	\$230	Interest	\$376
Other	\$271		
Total	\$3,462	Total	\$4,447

Budget Deficit **\$984 Billion**

Source: Congressional Budget Office, The Budget and Economic Outlook: 2020 to 2030

7

Past and Future of Deficits

Figure 1.

Deficits in CBO's September 2020 Baseline Versus Its March 2020 Baseline

Percentage of Gross Domestic Product

The deficit in 2020 will be the largest since 1945 as a percentage of GDP. Under current law, it is projected to shrink over the following few years, eventually returning to levels similar to those CBO projected before the coronavirus pandemic. Nevertheless, annual deficits would exceed their 50-year average throughout the 2021–2030 period.

8

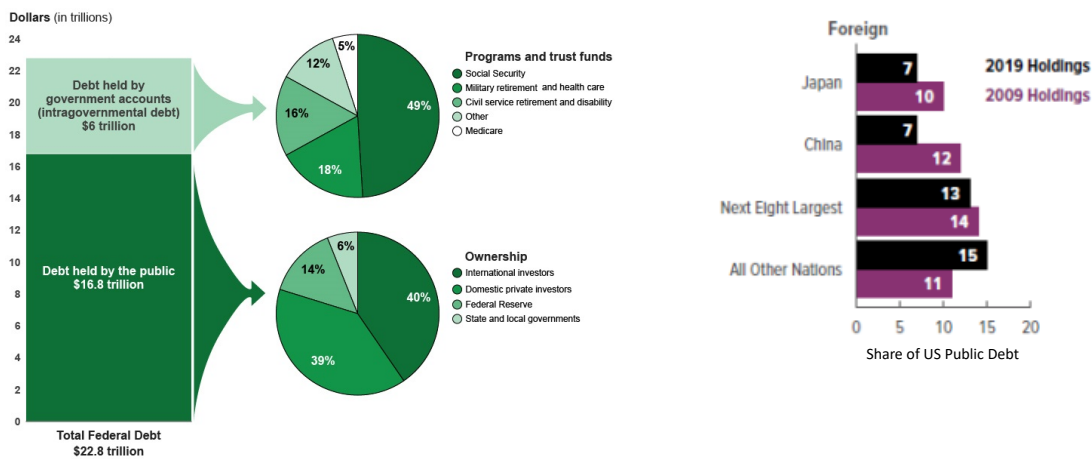

Debt vs. Deficit

The Sum of All Past Deficits Less Surpluses Equals the Debt

9

A Breakdown of the Total Federal Debt

10

Not All Debt Is Created Equal

- **Some debt can reduce the availability of investment funds to other borrowers.**
 - Often referred to as “crowding out” private investment

- **Intra-governmental debt is important bookkeeping.**
 - This debt **DOES NOT** crowd out private investment.

- **Debt held by the public**
 - This debt **MAY** crowd out private investment.

- **Most analyses of debt focus on the federal debt held by the public.**

11

Two Measures of the Debt

12

CBO: Budget Analysts in Chief

- The Congressional Budget Office was founded in 1974 to provide Congress with information about the budgetary implications of legislation.
- Two kinds of Reports
 - Cost Estimates – HR 6036 VA Family Leave Act of 2020
 - Projections of Debt and Deficits – The Budget and Economic Outlook: 2020 to 2030

13

The All Important *Relative* Debt

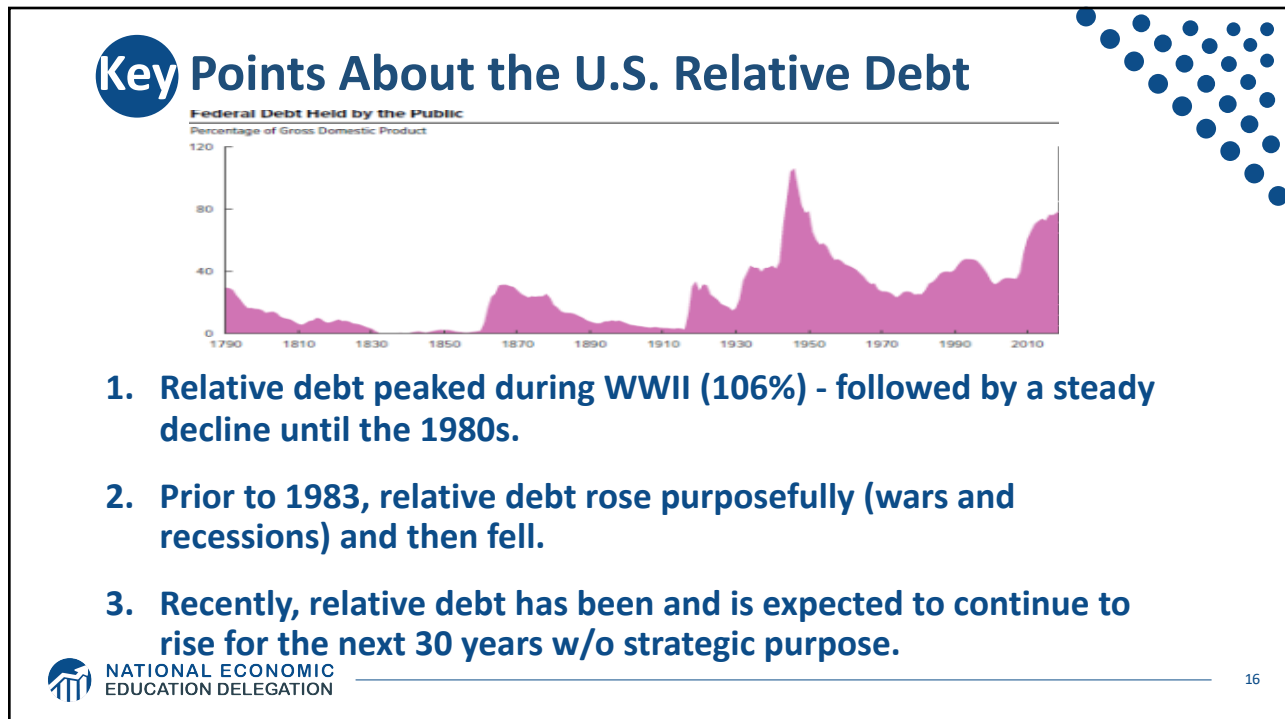

- CBO, analyzes the debt *relative* to GDP because:
 - To the extent that debt and deficits have burdens these burdens depend on the size of the debt *relative* to the size of the economy.

	Total Public Debt	Relative Debt Debt/GDP
United States	\$17.0 Trillion	80%
Greece	\$0.4 Trillion	176%

14

15

16

What Caused the Post WWII Rel. Debt to Fall?

Between 58 and 74, relative debt fell by more than 50%, 47.8% to 23.4%, in spite of only 2 years of tiny surpluses.

17

Debt Dynamics

- **The Relative Debt is a fraction – Debt/GDP; Fractions fall if**
 - The *numerator* falls (budget surplus)
 - The *denominator* rises (nominal GDP growth)
 - The *denominator grows* faster than the *numerator*
- **1958-1974, deficits caused the debt to grow, but not as fast as GDP.**

18

Traditional Views of the Cost of the Debt

- **First a non-issue: The analogy between household and government debt is inaccurate.**
 - The government does not have to pay back the debt.
 - Retirees cash in maturing bonds which are financed with new bond issues sold to younger people.
 - Interest on the debt is essentially paid by the young to their parents

Traditional View: Debt and Deficits Raise Interest Rates

1. **Crowding Out: Higher interest rates lead to less investment and over time to a smaller capital stock and reduced future output.**
2. **Foreign Borrowing: Higher interest rates lead to foreign capital inflows or foreign borrowing. With foreign borrowing, some of our GDP is paid to foreigners as interest.**

The Dog that Didn't Bark; Rising Interest Rates?

21

Maybe Debt Isn't a Problem After All: MMT

- **Stephanie Kelton provided a prominent and recent exposition of Modern Monetary Theory in her June 6th *NYTimes* op-ed, "Learn to Love Trillion-Dollar Deficits."**
 - US Treasury borrows in dollars and therefore cannot default (as opposed to Greece).
 - She argues that we can always find the money to increase federal spending.
 - Too bad the second part is not true.

22

Don't Just Take My Word for It

Question A: Countries that borrow in their own currency should not worry about government deficits because they can always create money to finance their debt.

Olivier Blanchard's Presidential Address to the AEA 1/2019

“If the future is like the past [with low interest rates],...the issuance of debt without a later increase in taxes may well be feasible. Put bluntly, public debt may have no fiscal cost.”

But,

“My purpose...is not to argue for more public debt, especially in the current political environment. It is to have a richer discussion of the costs of debt...than is currently the case.”

What the Traditional View Got Wrong

- **Stabilizing the Relative Debt, Debt/GDP, requires that the growth rate in debt equals the growth rate of GDP.**
- **The growth rate in debt has 2 parts:**
 1. The growth rate from interest on the debt which is just the interest rate.
 2. A contribution due to the difference between programmatic outlays less revenues
- **The traditional view assumes that the interest rate on debt is greater than the growth rate of GDP**
 - So, 2. must be negative to offset excess of 1.
 - i.e., programmatic outlays must be less than revenues.

25

An Almost Free Lunch

- **If the interest rate is *less* than the growth rate of GDP, then Debt to GDP can be stabilized with a (small) *deficit* in programmatic outlays relative to revenues.**
- **Blanchard is not MMT (when the crisis is over)**
 1. Relative Debt must be stabilized by reducing the size of deficits
 2. But it may not crucial at what level of debt we stabilize.

26

But why must the relative debt be stabilized

- **MMT is right that for practicable purposes the US cannot default on its debt, but...**
- **International investors, however, can still lose if the exchange value of the dollar falls.**
- **Remember, foreign holdings of the public debt amount to 40 percent of the total**

27

Why do Foreigners Buy US Treasuries?

- **Market for Treasuries is the deepest, most liquid capital market in the world.**
- **US economy has a history of political and economic stability.**
- **The dollar is the largest international reserve currency.**
 - Most trade transactions are quoted in dollars, e.g., oil.
 - With some exceptions, foreigners borrow in dollars. E.g., Yankee bonds

What would happen if foreigners lost confidence in the stability of the dollar?

28

Fiscal Crisis, or a Run on the Dollar

Concerns about the government's fiscal position could lead to a sudden and potentially spiraling increase in people's expectations of inflation, a large drop in the value of the dollar, or a loss of confidence in the government's ability or commitment to repay its debt in full...

The risk of [such] a fiscal crisis appears to be low in the short run despite the higher deficits and debt stemming from the pandemic.... Nonetheless, the much higher debt over time would raise the risk of a fiscal crisis in the years ahead.

CBO, *The 2020 Long-Term Budget Outlook*, 9/2020

Bottom Line: We Need to Worry about the Debt

1. Interest rates may not stay this low forever.
2. A fiscal crisis should be avoided at all costs.
3. The good news is we may be able to stabilize the relative debt without a running a surplus.
4. Stabilizing the relative debt would substantially reduce the possibility of the crisis

But, we must substantially reduce deficits after the pandemic

CBO (*The 2020 Long-Term Budget Outlook*, 9/2020):

By 2025, deficit must go from projected 5% to about 3%

By 2030, deficit must go from 5.5% to about 2%

Bending the Curves!
